GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

REGIONAL CHAIRMAN'S MESSAGE

Environmental awareness within the Region continues to be an important concern as we work together globally and locally for a cleaner, healthier environment.

We at the Region advocate environmental responsibility and have developed several programs to encourage local industries, businesses and institutions to seek better alternatives to the traditional methods of waste disposal.

The Regional Environment Department - Waste Management Division has compiled the "Green Pages" reference to further promote pollution prevention and the 3Rs of waste management - Reduce, Reuse and Recycle.

We believe that with continued cooperation between the Region and our industrial, commercial and institutional community, waste will be more effectively managed, making Hamilton-Wentworth a cleaner place in which to live, work and play.

Sincerely,

Terry Cooke
Regional Chairman

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

INTRODUCTION

Caring for the environment has prompted both the public and private sectors to explore new and improved ways of managing and recycling waste. Ensuring that institutions and businesses follow good practices in the areas of energy efficiency, water conservation, waste management and recycling, can reduce operating costs, save money and create new jobs.

Staff from the Regional Environment Department can provide your company with information regarding environmental, pollution prevention and compliance issues. For more information contact the Regional Environment Department at (905) 546-4417.

The Green Pages Directory, produced by the Region is an important component in Hamilton-Wentworth's waste diversion goal of a 50% reduction by the year 2000, as set by the Ministry of Environment. This directory is a valuable resource that will:

- identify environmental services and information sources needed by the IC&I community
- promote existing services and the development of new markets in the Region of Hamilton-Wentworth and vicinity
- reduce material going to landfill, sewer and to the atmosphere, while increasing the amount of recycled waste re-introduced into the marketplace
- encourage behaviour that will alleviate present and future environmental concerns

The Regional Environment Department does not warrant that any companies or businesses listed will serve your needs or deal with your concerns satisfactorily. Those using the directory are advised to make their own inquiries and arrangements with the listed companies or businesses directly.

Every effort has been made to include all companies and businesses involved in waste management, recycling or other environmental services in the Region of Hamilton-Wentworth and vicinity. We welcome any suggestions to make our information more complete.

GREEN PAGES

REGIONAL ENVIRONMENT DEPARTMENT WASTE MANAGEMENT DIVISION

GENERAL INFORMATION

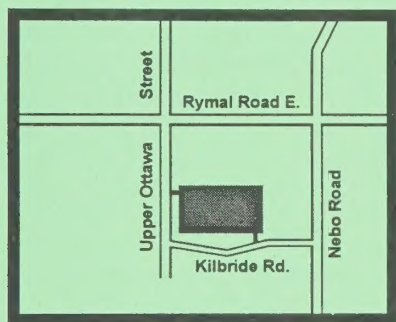

GARBAGE COLLECTION SERVICE:

Household garbage collection in the Region of Hamilton-Wentworth is performed by each Area Municipality or its contractor. For inquiries concerning curbside garbage pick-up contact your Municipality:

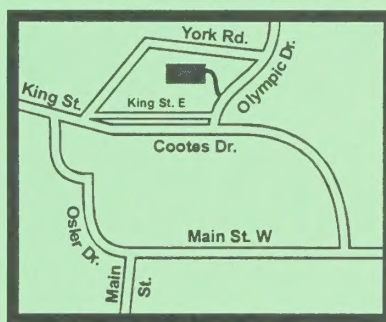

Ancaster	573-6183	Hamilton	546-2785	Flamborough	573-6183
<u>or</u>	1-800-330-0868			<u>or</u>	1-800-330-0868
Stoney Creek	643-1261 (Ext. 217)	Glanbrook	692-9225	Dundas	628-6327

REGIONAL DISPOSAL FACILITIES:

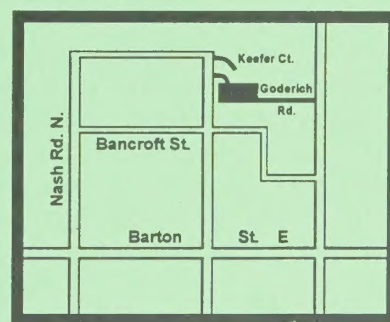

Solid waste can be dropped off at the Region's waste disposal facilities, called "TRANSFER STATIONS". For waste disposal information call the SpecTel Transfer Station Information Line at 521-5600, CODE 7492 (24 hours a day, 7 days a week) or 546-4417/2157 (Monday to Friday, 9:00 a.m. to 5:00 p.m.). Transfer Stations are located at:

Mountain Transfer Station
Upper Ottawa St. & Kilbride Rd.

Dundas Transfer Station
Olympic Dr. & King St.

Kenora Transfer Station
Kenora Ave. & Bancroft St.

HOURS OF OPERATION:

8:00 a.m. to 6:00 p.m., Monday to Saturday
Closed: Sundays, Christmas Day, New Year's Day and Good Friday.

FEES:

Fees always apply to all commercial vehicles and private haulers. Any residential, non-commercial vehicle is allowed to bring 150 kg (330 lbs) of garbage FREE OF CHARGE once per day. Fees at a rate of \$7.00 per 100 kg will apply to any residential, non-commercial vehicle delivering loads exceeding 150 kg (330 lbs).

ACCEPTABLE SOLID WASTE:

General commercial and residential waste generated within the Hamilton-Wentworth Region, including kitchen waste, four car tires per day per resident, old furniture, glassware, clothing, sweepings, tree clippings, crates, approved industrial by-products (in limited amounts), most articles under four feet in length, barbeques (but no propane cylinders), wood under four feet in length, smoke detectors, insulation, some car parts such as seats, dashboards, mufflers, carpet, pipes and pipe fittings under four feet in length. Bunkers are available to receive leaf and yard waste, shingles, Blue Box recyclables and scrap metal.

NON-ACCEPTABLE WASTE:

Asphalt, tree stumps, tires from industrial/commercial generators, wood products over four feet in length, abandoned motor vehicles, propane cylinders or other compressed gas vessels, metal drums or barrels, agricultural waste, dead animals, liquid waste, untreated sewage, snow, hazardous waste as defined in RSO 1970, 824 as amended and other materials which may be deemed by the Commissioner of Environment to be "Non-Acceptable".

INDUSTRIAL/COMMERCIAL DISPOSAL & RECYCLING:

Contact the Region at 546-4417/2157 for information about existing services.

SEPTIC WASTE:

Septic Waste generated from recreational vehicles may be discharged at the Mountain Transfer Station or the Woodward Avenue Waste Water Treatment Facility. A fee applies.

RADIOACTIVE WASTE:

Contact the local branch of the Ministry of the Environment 521-7640.

(Smoke detectors are not classified as radioactive waste and can be disposed in regular garbage).

BLUE BOX RECYCLABLES COLLECTION SERVICE:

Recyclables include newspaper, phone books, flyers, glossy magazines/junk mail, household fine paper, paper egg cartons, soft covered books, windowed envelopes, greeting cards, boxboard (i.e. shoe and cereal boxes), corrugated cardboard, clear and coloured glass bottles and jars, food and beverage cans, aluminum pie plates, plastic bottles and jugs and plastic bags. For inquiries concerning pick-up of Blue Box materials or to order a Blue Box anywhere in the Region, call the Recycling Hotline at 545-4480 or 1-800-860-8418 (from 519 area code).

BLUE BOX RECYCLING DEPOTS:

Recyclables may be brought to any Transfer Station, during regular operating hours, and deposited in the Blue Bins. Third Sector at 1519 Burlington St. East also accepts recyclables between 9:00am and 5:00pm Monday to Friday.

HOUSEHOLD HAZARDOUS WASTE DEPOT (H.H.W DEPOT):

The H.H.W. Depot is a service open to residents of the Region. The Depot is open every Saturday from 9:00 a.m. to 5:00 p.m. and is located at 239 Lottridge St. N. in Hamilton (North of Barton St. between Sherman Ave. and Gage Ave.). **ALL WASTES MUST BE SEALED AND LABELLED.** The Depot accepts wastes such as used motor oils, old paints, pesticides, batteries (auto and dry cell), cleaners, pool chemicals, outdated medicines, syringes, cooking oils and propane cylinders. Asbestos is also accepted by special arrangement with Hotz Environmental (527-9266). Radioactive waste, fluorescent tube ballasts, biological wastes, PCBs, explosives and ammunition are not accepted at the depot. Commercial/industrial generators do not qualify for this free service. For more information call the 24 hour Spectel information line at 521-5600, Code 7491.

LEAF AND YARD WASTE COLLECTION:

Area Municipalities may collect leaf and yard wastes at various times throughout the year. Contact your local municipality for applicable program details.

LEAF AND YARD WASTE DROP-OFF:

The Transfer Stations are equipped with bunkers for compostable leaf and yard waste. Acceptable materials include leaves, grass clippings, tree and shrub trimmings under 4 feet in length, wood chips, fruit and vegetables from gardens, flowers and other organic matter. All leaf and yard waste must be removed from bags or other containers before placement in bunkers. Branches must not exceed seven (7) centimetres in diameter.

APPLIANCES/WHITE GOODS RECYCLING COLLECTION SERVICE:

If the appliance is still serviceable, try to make arrangements with a charitable organization for pick-up. If the appliance is non-reusable, the Region, through its contractor, will pick up stoves, ovens, refrigerators, freezers, clothes washers/dryers, dishwashers, dehumidifiers, window mounted air conditioners and hot water tanks, free of charge. The ozone depleting refrigerants are removed from the applicable units by the contractor before disposal. Call 573-6183 or 1-800-330-0868 for collection information.

BACKYARD COMPOSTERS:

Backyard composters may be purchased for a fee from Green Venture. Call Green Venture at 540-8787, the 24 hour Spectel Composting Information Line at 521-5600, Code 7493, or the Regional Environment Department, 546-4417, for more composting information.

DEAD ANIMALS:

Contact the local S.P.C.A. or a local rendering company

CONSTRUCTION & DEMOLITION DEBRIS - 10.0

While the construction and demolition industries are both involved with the handling and use of building materials, it is important to distinguish the two as each may require different methods for the 3Rs and disposal requirements.

Construction waste source separation is less complicated than demolition waste since waste is generated on an item-by-item basis. It is difficult to control due to the involvement of multiple trades and contractors. However, longer project life allows for more opportunity for the separation of the different categories of waste.

Demolition waste involves post-use materials which may have components attached or which may have been altered (painted, glued, etc.). As demolition waste are commingled with many components, separation of these components is difficult. The short duration of the projects results in limited opportunities for source separation. However, since only one contractor is involved (usually), control is simplified (*Gipper's Guide to Environmental Purchasing, 1995*).

Some of the materials found in C & D debris originate from many sources.

<u>Waste Type</u>	<u>Source</u>
Rubble	Dirt, bricks, cinder blocks, concrete
Asphalt	Roads, bridges, parking lots
Tar-based materials	Shingles, tar paper
Ferrous metal	Pipes, roofing, flashing, steel
Non-ferrous metal	Aluminum, copper, brass, stainless steel
Untreated wood	Framing, scraps
Treated wood	Plywood, pressure-treated, creosote-treated
Glass	Windows, doors
Plastic	Vinyl siding, doors, windows

Many new end-use markets can be created by source separating these materials and re-introducing them into mainstream industries. The chart below is an example of some end-use markets:

<u>Waste Type</u>	<u>End-use</u>
Dirt	Soil, soil conditioner, landscaping, landfill cover
Bricks	Masonry, landscaping, ornamental stone
Concrete, rocks	Fill, roadbeds
Tar-based materials	Mixed with asphalt for resurfacing
Ferrous/non-ferrous metal	Scrap metal buyers
Glass, plaster	Aggregate fill, asphalt
Wood	Fuel, landscaping, compost bulking agent, animal bedding, building products
Cardboard	Fuel pellets

COMPANY INFORMATION

SERVICES

AAROC AGGREGATES AND RECYCLING LTD.

31 Exeter Road
London, Ontario
N6L 1B6

Jen Brufatto

(519)652-2104

Fax: (519)652-9095

Accepts construction and demolition debris including concrete, asphalt, fill, brick, shingles, wood and drywall for recycling; on-site crushing of demolition materials; on-site stump grinding & removal; prefers materials loose but sorted; minimum one truck load

CANADIAN EAGLE RECYCLERS INC.

16 Melanie Drive
Brampton, Ontario
L6T 4K9

Marc Mittleman, Michael Card

(905)792-2209

Fax: (905)458-4149

Mobile crushing & screening plant for on-site recycling of rubble/concrete and brick; mobile wood grinding service and magnetic separation; accepts asbestos, broadloom, metal scrap and drywall for recycling

CANADIAN WASTE SERVICES INC.

505 Kenora Ave. N.
Hamilton, Ontario
L8E 3P2

Mel Smith

(905)573-6183

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

ORGANIC WASTE (FOOD AND VEGETATION) - 20.0

Commercial food wastes are generated by retail outlets, hotels, restaurants, airlines, institutions, and food manufacturing and distribution companies. Food wastes can be in the form of trim from produce, flower cuttings, baked goods, deli materials, dairy or frozen products, and prepared meats.

Food that is safe and still suitable for human consumption, but cannot be sold for marketing reasons, can be donated to social agencies such as food banks or hostels. Export to foreign countries as food relief is also an option. Food wastes that are not suitable for human consumption can be diverted from landfill in a number of ways: farmers may use this food for animal feed or agricultural land use.

Composting is an alternative for industrial, commercial and institutional and domestic kitchen food wastes as well as leaf and yard materials. Restaurant or food processing grease trap wastes may be composted or otherwise treated and converted to a soil amendment.

The environmental benefits of composting are not confined to waste diversion which conserves landfill space and extends their lifespan. There are also many benefits from the use of compost including improved soil moisture and nutrient retention, decreased soil erosion, reduced soil surface crusting, plant disease suppression, improved tilth, etc.

Food and vegetable oils are recycled into products such as soap and animal feed. Certain parts of fish, meat and fowl are considered delicacies and may find a market elsewhere in the world.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

GLASS, CERAMICS, REFRACTORIES - 30.0

The recycling of container glass products is quickly becoming an integral part of the glass manufacturing industry. Glass containers are virtually 100 percent recyclable where new glass containers can be made from old ones over and over again. Other glass types such as automotive, laminated glass, etc., currently have limited reuse, but may generate new opportunities for the future.

Manufacturers can acquire glass products to make new ones as containers for food, beverages, perfume, cosmetics, medicine and other consumer goods. The glass recycling process begins with the collection of used bottles and other containers. The glass is crushed into small pieces called cullet. The cullet is then mixed with melted glass, soda ash and limestone to produce new glass. Glass manufacturers can use as much as 25 percent cullet in their process, saving energy, landfill space and most importantly, natural resources.

A major concern for glass recyclers and manufacturers is contamination. Common contaminants include: ceramics, china (eg. tiles, cups, plates, vases), windows, mirrors, drinking glasses, crystal, laboratory glass, cookware and light bulbs. These contaminants have different physical or chemical properties and should not be mixed with container glass.

Glass recycling is finding a place with end-use markets beyond the container industry. Such examples are asphalt aggregates in place of sand in concrete (eg. glasphalt) and fiberglass insulation.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

METAL - 40.0

Ferrous and non-ferrous metals are reusable and recyclable materials. Factories and mills that produce metal that is put back into their process is called "home scrap." Goods made of metal that is discarded is called "obsolete scrap." Examples are old cars, railroad tracks, appliances, farm equipment and steel beams.

Steel is the most recycled material in Canada. All steel products are 100% recyclable and can be recycled indefinitely. For instance a car can be recycled into steel for use in a bridge, then the bridge can be recycled to make stoves, and then stoves into food and drink cans.

Steel food and beverage cans are 100% recyclable and implementation of a collection program in the work place easily recovers this valuable resource. Steel cans are made of steel with a protective tin coating. Recyclers are encouraged to densify cans for efficient and economical shipment.

Aluminum is 100% recyclable. Aluminum cans, T.V. dinner trays, pie plates, oven roasters, oven liners and household foil are all recyclable. Aerosol cans, aluminum tubes, wrap, cigarette foil, chip bags, yogurt lids and juice boxes are not recyclable.

Batteries contain a number of heavy metals. There are several types, including lead-acid or wet cell, dry cell and button cell. Thousands of these batteries are collected at the end of their useful life span and sent to battery recyclers. There, the metals and other materials such as plastic cases are reclaimed for reuse. Reclaimed metals include lead, nickel, cadmium, zinc, mercury, silver and lithium. All battery types, with the exception of lithium batteries, contain added mercury either in the form of electrode material (mercuric oxide) or as a gas suppressant. Mercury is also found as a naturally occurring impurity in the other battery materials. Zinc-air batteries have now replaced mercuric oxide-containing button cell batteries and are replacing the larger battery sizes used in the medical field.

The improper disposal of batteries containing mercury and other toxic metals poses serious environmental and health risks. To reduce battery use and the number requiring disposal:

- Avoid the use of batteries when possible - use non-battery sources of power such as regular household current. These are generally cheaper sources of power and eliminate the battery disposal problem.
- Otherwise, use rechargeable (alkaline or nickel-cadmium) batteries when possible
- Substitute zinc-air or other non-mercury containing batteries for those containing mercury.

Accepts lead-acid batteries, lead sludge, lead drosses and lead plates; 40,000 lbs. minimum quantity - will pick up; no containers

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

OILS/COOLANTS - 50.0

Waste oils may have been used as lubricants, heat dissipating, anti-rust agents or in hydraulic systems. As a lubricant, oil reduces friction and prevents wear. With heat dissipation oil cools parts and also reduces rust. Used motor oil comes from car service centers, maintenance facilities, military installations, industrial plants, farm equipment, and do-it-yourself oil changers.

Used motor oil may be classified as liquid industrial or hazardous waste. Hazardous oil waste can contain contaminants such as lead, cadmium, chromium, arsenic, and barium. Industrial generators, including service facilities, are required under the Ministry of the Environment regulation 347 to manage their used oil.

Used oil is recycled by re-refining. Re-refining motor oil involves the removal of water, light hydrocarbons and the separation of lubricants from heavy oil and metals.

Glycols may be used in cooling or hydraulic applications. Water glycols are used in hydraulic systems where flammability is a concern.

Ethylene or propylene glycol or anti-freeze is the coolant normally used for car engine cooling. Motor vehicle anti-freeze can be recycled on-site with units which return the filtered anti-freeze to the vehicle's cooling system. Alternately, glycols/anti-freeze can be recycled off-site at larger reclaiming centres.

Oil filters can be compacted and used as a feedstock in steel-making or can be shredded, with the metal recovered for recycling, the paper used as a waste derived fuel and the oil recovered for re-refining.

Accepts used oil, transmission and booth filters - in drums, for recycling; free pick-up and delivery of drums, one drum/year

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

CHEMICALS - 60.0

The collection and recycling of paint and solvent waste generally involves a two step process. The first part involves delivery or pickup of the waste product from the household or site to a collection agency. The second step involves segregation and consolidation of paint waste to a recycler or approved disposal site.

Paint is separated into three groups: recyclable latex, recyclable alkyd and non-recyclable products (eg. contaminated paint, unknown paints, stains, epoxies, etc.). Recycled paint is tested for contamination. The useable paint is packaged into 45 gallon drums and sent to be reworked. It then is strained, treated and packaged in 20 litre pails for the market.

Recycled paint is most useful for exterior use, municipalities or large institutions for: exterior wood structures, exterior masonry surfaces, and fences. Paint cans are also recycled into reusable steel.

Waste inks can be reclaimed on or off-site by blending to produce black ink.

Chlorofluorocarbons (CFCs) are used as refrigerants and as solvents in metal cleaning operations. As CFCs have been identified as major contributors to the depletion of the stratospheric ozone layer, legislation prevents the release of CFCs to the atmosphere. CFCs can be recycled onsite from refrigeration systems and motor vehicle air conditioners.

GREEN PAGES ENVIRONMENTAL MANAGEMENT D!RECTORY

PAPER - 70.0

Paper products are processed from plant fibres of softwood and hardwood trees, shrubs, grasses and vegetable material. Commercial paper is made by either chemical or mechanical processes. High quality paper is produced by the chemical process and lower grade papers are made by the mechanical process. The major paper types include: fine paper, newsprint, magazine, corrugated containerboard, paperboard, industrial, household and specialty papers.

Newsprint is being recycled from old newspapers and is finding greater use in the newspaper publishing business. Magazines can be reused by schools, libraries, offices and other institutions before going back into the manufacturing process for recycling.

Corrugated cardboard is described as linerboards enveloping a corrugated medium (the fluted middle layer). If it is in good condition then it may find use as shipping material. Damaged cardboard can be recycled into kraft paper for bags, cardboard containers, packaging materials, biodegradable supplies and paper towels.

Fine paper is used primarily in offices, schools and homes. Source separation and sorting is the key to producing good quality recycled paper. Fine paper can be recycled as 100% post-consumer paper.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

BIOMEDICAL WASTE - 80.0

Biomedical (pathological) waste has been redefined by the Ministry of Environment (MOE) to clarify and specify those wastes which are considered biomedical and those which are not. This clearer definition will allow generators to minimize the quantities of waste requiring special handling.

Should you require information regarding those wastes considered to be biomedical wastes, please contact the MOE's Industrial Hazardous Waste section at (416) 314-4186.

COMPANY INFORMATION

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

PLASTICS - 90.0

Plastic is a synthetic material composed of carbon and hydrogen molecules. These molecules are tightly bound making plastic difficult to decompose. There are over thirty different types of plastics. The most common are polyethylene terephthalate (PET), used in soft drink bottles; high density polyethylene (HDPE) used for milk and juice jugs, shampoo bottles and motor oil containers; low density polyethylene (LDPE) used for grocery bags; polyvinyl chloride (PVC) used to make vegetable oil bottles; polypropylene (PP) used for margarine and yogurt tubs and polystyrene (PS) for styrofoam.

The Society of Plastics Institute (SPI) of Canada developed a coding system for plastics:

1 - PET	2 - HDPE	3 - PVC	4 - LDPE	5 - PP
6 - PS	7 - Other			

It is estimated that eighty-five percent of all plastic bottles are made from HDPE and PET. HDPE plastics can be reprocessed into pellets for bottle and sheet products. PET is being used in fiberglass, jackets, pillows, twine, rope, carpets and electrical parts.

The efficiency of recycling plastic can be increased if containers are rinsed and bottles with hazardous material labelled, segregated and disposed of in a registered hazardous waste landfill site.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

WOOD - 100.0

Wood waste can be acquired from several sources. Forestry sectors produce sawdust, end-cuts, chips, pallets and skids. Construction and demolition debris is a source for framing, lumber, end-cuts, plywood, particleboard, moulding and scraps. Other wastes include tree branches, brush, hydro poles, Christmas trees and railway material.

Waste wood that is found in good condition can be reused in building projects. Wood pallets can be repaired for reuse. Contaminants such as paints, varnishes or laminated surfaces may make the wood unacceptable for recycling. Acceptability depends on the process, its capability to remove contaminants and end-use markets.

Other uses of wood waste include chips or shavings for landscaping, animal feed, particleboard production, roofing materials and charcoal briquettes.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

TEXTILES - 110.0

Textiles that can be considered reusable are clothing, upholstery, linens and towels. Most textiles are found to be either reusable or recyclable. Social organizations recover textiles through drop-bins and pickup services.

Used clothing comprises forty percent of collected textiles. These textiles are usually repaired, cleaned and redistributed to needy organizations locally and internationally. Paper, yarn and padding can be made from textile. Paper made from rag bond is used for printing and writing; wool can be rewoven and rag fibre can be used for padding, carpet and auto interiors. Rags have many uses in industry for machinery cleaning and spills cleanup.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

COMPUTERS - 120.0

As computer technology has evolved, the number of obsolete computers requiring disposal has increased. The value of computer components has made component recovery and recycling a viable alternative to landfilling.

The typical computer contains both base and precious metals and plastics or combinations of these materials. Computers are dismantled with certain components separated for reuse and the remaining plastics and metals separated for recycling.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

MISCELLANEOUS MATERIALS - 190.0

Miscellaneous materials includes wastes that may or may not fit into another category such as fluorescent lamps. Lamp reclamation involves mercury removal, recovery of the glass and metals recovered with the phosphorous disposed to landfill. Fluorescent ballasts may contain small amounts of PCBs located in the capacitor. Mercury vapour ballasts in industrial and streetlighting fixtures may also contain PCB containing capacitors. When re-ballasting, the Ontario Ministry of the Environment should be contacted for information and assistance in the identification and proper handling of PCB-laden ballasts.

Disposable diapers occupy from 2% to 5% of landfill volumes. At present, local recycling facilities for disposable diapers do not exist. A more environmentally responsible alternative may be the use of cloth diapers. Diapers can be purchased from diaper services which offer pickup, laundering and delivery services.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

REUSE - 300.0

Many valuable items that may previously have been going to landfill can be reused or refurbished and reused to extend their life. In addition to traditional reuse items such as clothing, appliances and furniture, building materials, computer equipment and paints can now be obtained at reuse centres. This trend should continue as the value of reusable materials is recognized.

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

EQUIPMENT & HARDWARE - 400.0

Pollution prevention or source reduction of waste is an important aspect of any company's waste management strategy. Off-site recycling is the conversion of recyclable material into new products while on-site recycling, a source reduction technique involves the recovery of material on-site for reuse. Examples include solvent and antifreeze recovery. Availability of portable on-site recycling equipment makes this a cost effective and convenient alternative to off-site recycling or disposal.

(800)461-4350 Fax:(416)489-5780

REGIONAL MUN. OF HAMILTON - WENTWORTH

35 King Street East
Hamilton, Ontario
L8N 4A9

Regional Environment Department - Waste Management Div'n. is responsible for the planning/administration of the Region's waste management program, including recycling, composting, incineration, landfill ops., pollution prevention promotion & administration of Sewer Use Control by-laws.

(905)546-4417 Fax:(905)546-4494

COMPANY INFORMATION**SERVICES**

RUBBER ASSOCIATION OF ONTARIO
#308 - 89 Queensway West
Mississauga, Ontario
L5B 2V2

(905)270-8322

Manufacturers' association; organizes rubber recycling symposium held every two years; have member representation on scrap tire stewardship boards

SOUTHAM ENVIRONMENTAL GROUP
1450 Don Mills Road
Don Mills, Ontario
M3B 2X7

Margaret Naering

(416)442-2122

Fax: (416)442-2200

Provides information regarding environmental issues and occupational health and safety, including environmental and occupational health & safety legislation on CD-ROM, weekly newsletters and monthly compliance reports.

COMPANY INFORMATION**SERVICES****C.D. SONTER MANAGEMENT INC.**

1109 Britannia Road East
Mississauga, Ontario
L4W 3X1

Carmen Dodaro

(905)564-4752

Fax: (905)670-0705

Provides corporate and individual environmental training.

GREENBRIDGE MANAGEMENT INC.

2155 Leanne Blvd., Suite 260
Mississauga, Ontario
L5K 2K8

(905)855-0975

Fax: (905)855-0977

Environmental Management services

RIS - RESOURCE INTEGRATION SYSTEMS

400 Mt. Pleasant Rd., Ste. Two
Toronto, Ontario
M4S 2L6

Heather Wilson, Ext. 199

(416)480-2420

Fax: (416)480-2419

Consultant specializing in waste reduction and recycling; wide range of consulting services; carries out a wide variety of waste related projects for public and private sector clients; extensive experience in training and public education projects E-mail: 76734.1765@compuserve.com

SPILL MANAGEMENT INC.

45 Upper Mt. Albion Rd.
Stoney Creek, Ontario
L8J 2R9

Cliff Holland

(905)578-9666

Fax: (905)578-6644

Auditing, planning, training and communications services for Environmental Management Systems and ISO 14001; individualized spill management and spill response training programs for over 60 types of industries; site and product specific training programs

TEAM - 1 EMERGENCY SERVICES

1650 Upper Ottawa St., Unit 3
Hamilton, Ontario
L8W 3P2

Mitchell Gibbs

(905)383-5550

Fax: (905)574-0492

Environmental services include: chemical emergency response, high hazard tank entry, emergency air training and staff training; trained, certified emergency crews/equipment available

THE CANADIAN STANDARDS ASSOCIATION

178 Rexdale Boulevard
Rexdale, Ontario
M9W 1R3

Sales/Seminar Reg'n. Dep't.

(800)463-6727

COMPANY INFORMATION

SERVICES

BUSINESS ADVISORY CENTRE OF HAM. - WENT.

7 Innovation Drive, Suite 100
 Flamborough, Ontario
 L9J 1K3

(905)689-2400

Fax:(905)689-2400

The BAC is a "not-for-profit" organization which provides advice to small business to help improve management, technical & marketing practices etc., free information & counselling on starting a small business & low cost seminars on business start-up, planning & marketing/sales

CANADIAN CENTRE FOR POLLUTION PREVENTION

100 Charlotte Street
 Sarnia, Ontario
 N7T 4R2

Sue McKinlay, Info. Officer

(800)662-9790

Fax:(519)337-3486

Provides access to pollution prevention (p2) information through search services, hard copy distribution, links to primary p2 centres, reference library, publication listing, internet site, on-line p2 forum, newsletter, bulletins & conferences. (c2p2@sarnia.com) (www.c2p2.sarnia.com)

ENVIRONMENTAL COMMISSIONER OF ONTARIO

1075 Bay Street, Suite 605
 Toronto, Ontario
 M5S 2B1

Manik Duggar, Educ'n. Officer

(416)325-3372

Fax:(800)701-6454

Environmental Bill of Rights Homepage:

<http://www.ene.gov.on.ca/envision/ebr/>**HAMILTON PUBLIC LIBRARY**

55 York Boulevard
 Hamilton, Ontario
 L8N 4E4

(905)546-3200

The HPL - Central Library maintains a Business Science, Technology & Government Documents Department as the hub of its environment service, including "how to" legal, government, scientific & technical issues. Books, journals, videos & a computerized information service are available.

NATIONAL RESEARCH COUNCIL CANADA

Montreal Road (Bld M-55)
 Ottawa, Ontario
 K1A 0S2

(613)993-1600

Fax:(613)952-9112

Canada Institute for Scientific & Technical Information (CISTI) - integrated info. services to Canadian researchers in science, engineering and biomedicine; backed by comprehensive collection of printed materials and electronic online systems to provide access to collection

RECYCLING COUNCIL OF ONTARIO

489 College St., Suite 504
 Toronto, Ontario
 M6G 1A5

(416)960-1025

Fax:(416)960-8053

RCO can provide materials markets, waste audit and waste reduction planning, products, equipment & technology & other waste management information; maintains a comprehensive waste management library; information services offered on-line @ <http://www.web.apc.org/rco>

REGIONAL MUN. OF HAMILTON - WENTWORTH

35 King Street East
 Hamilton, Ontario
 L8N 4A9

Wayne Poole

(905)546-4490

Fax:(905)546-4494

Regional Environment Dep't. - Waste Management Division maintains a business oriented pollution prevention document/videotape (generic & sector specific information) lending library. Copies of the "GREEN PAGES" are also available. Email: regenvwm@netaccess.on.ca

GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

GLOSSARY OF TERMS 600.0

- B -

Baler - A machine that compacts waste materials into bundles to reduce volume and retains them in this compacted form to reduce transportation costs.

Biodegradation - A natural process involving the assimilation or consumption of a material by living micro-organisms.

Biodegradable Material- Waste materials capable of being broken down by bacterial or microbial action.

Bioremediation - Process under which microorganisms, principally bacteria and fungi, are used to convert organic wastes into biomass and harmless metabolic byproducts such as Carbon Dioxide (CO₂), Methane (CH₄) and inorganic salts.

Bottom Ash - The residue which remains at the bottom of an incinerator after waste is burned. It can be used in building materials such as concrete and as road bed fill.

British Thermal Unit (BTU) - The unit of heat required to raise the temperature of one pound of water by one degree Fahrenheit. In resource recovery systems, BTU indicates the amount of heat energy produced from burning a given amount of waste.

Buy-Back Centres & Programs - Facilities or programs where individuals return recyclable/reusable materials to processors for payment.

- C -

Certificate of Approval (C of A) - A legal document which is required for the operation of any waste management facility under the Ontario Environmental Protection Act.

Classification/Sort- Sorting of materials such as plastics, glass, aluminum, steel and paper into uniform categories or classes, as part of the recycling process.

Coding - In the context of waste, coding refers to a system used to identify recyclable materials. The coding system for plastic packaging, a mobius loop with a number in the centre and letters underneath, indicates the resin from which each container is made. The code is moulded into the bottom of the bottles to help recycling sorters identify the different resins.

Contaminated Material - generally refers to recyclable materials which can no longer be recycled, or have a decreased value, because they are contaminated with, or are covered by, an unwanted substance. For example, OCC and plastic materials are classified as "contaminated materials" if they are covered by oil, food or other substances.

Cover Material - A backfill, usually dirt or ash, free of biodegradable organic matter, used to cover compacted waste in a sanitary landfill. If there is insufficient soil cover available, then plastic foam sprays can be applied in some locations.

Cullet - Broken glass that can be remelted into new glass products.

Curbside Pickup/Collection - Selected recycling materials are collected at the curb, usually from specially designated bins (i.e. blue boxes), for distribution to appropriate processing facilities.

Compactor - Power-driven mechanical equipment that densifies (compresses and reduces the volume of) waste materials. Compactors, which are often installed on residential and commercial refuse trucks, contain material under pressure and will not allow it to expand until it's unloaded.

Composting - A process through which organic waste materials are reduced to humus through biodegradation

- D -

Degradable Plastics - Plastics specifically developed or formulated to break down after exposure to sunlight or microbes. For example, beverage pack rings are now made from photodegradable plastic. Self-dissolving surgical sutures have also been developed to biodegrade within the body.

Deposit/Returns Systems - Established in various parts of Canada to help reduce packaging litter. A deposit is paid when purchasing items such as beverages and is refunded when the containers are returned.

Disposal - The final disposition of wastes, either through incineration or landfilling.

Drop-off Recycling Centres - Facilities, often unattended bins, where individuals can deposit recyclable materials such as plastics, metals, glass and newspapers.

Dump - An open, un-managed site where garbage is buried or left to decompose. Many dumps, now closed because of environmental problems, have been replaced with modern sanitary landfills.

- E -

Energy From Waste (EFW) - The concept of burning waste in an incinerator and using the released energy to make steam or to generate electricity which could be used in a variety of ways (eg. to heat buildings, fed into the power grid).

Energy Recovery - The recovery of energy from a combustion process in useable forms such as heat or electricity.

Environment - In this document, environment is defined as air, land, and water, or any combination or part thereof, of the globe.

- F -

Fly Ash - Non-combustible particulates generated when burning waste materials. Modern incinerators are equipped to capture fly ash and prevent it from entering the atmosphere. Fly ash is often toxic and causes disposal problems as a result of incomplete combustion.

Fibre - The smallest units of organic growth used in producing pulp due to characteristics of stiffness and tensile strength. In recycling, the fibre strands are recovered from waste paper and reprocessed on the paper machines.

- G -

Groundwater - Water which exists in underground passageways in rocks and which flows in response to gravity; often the source of water for communities.

- H -

Hazardous Material - A hazardous material (solid, liquid, gas) is a substance or a combination of substances with properties which, if not adequately controlled, could result in human illness or injury. Hazardous materials may contain hazardous chemical agents and or hazardous chemical agents and or hazardous biological agents (eg., micro-organisms).

HDPE (High Density Polyethylene) - A recyclable translucent or opaque semi-rigid or flexible thermoplastic which has a variety of uses such as oil containers and pails, liquid soaps and detergents, food containers for milk, vinegar and mayonnaise, etc.

Heavy Metals - A group of metals including aluminum, zinc, chromium, nickel, copper, tin, silver, antimony, cadmium, arsenic, lead, mercury, iron, and cobalt. These materials, due to their persistence in the environment, tend to contaminate the ecosystems's food web. Heavy metals are often present in the fly ash of incinerators and the leachate from landfill sites.

Mumus - Nutrient-rich material resulting from the natural decay of organic material in the soil; similar to compost.

- I -

Incinerator - A plant designed to reduce waste volume through combustion. Modern incinerators recover energy from the combusted waste.

Incinerator Ash - the post-combustion residue. Bottom ash is removed through a bottom grate and fly ash is removed via air pollution control equipment (typically an electrostatic precipitator or a bag-house filter system).

- L -

Landfill - Land used for disposal of waste (see sanitary landfill).

LDPE (Low Density Polyethylene) - A recyclable and generally flexible plastic used primarily for making various types of film such as wraps for baked goods and meats, grocery bags and garbage bags, a wide variety stretch and shrink wrap, bubble packaging, etc.

Leachate - The liquid which results when rain or melting snow percolates through a material and carries with it dissolved materials picked up as it moves. Depending on the location, leachate may contain hazardous materials which could contaminate groundwater or surface water. Leachate produced by the action of acidic rain or snow can contain higher levels of heavy metals as they more readily dissolve in acidic solutions.

Litter - Waste that has not been properly disposed of, either by placing it in a place or container specifically designed for that purpose, or by recycling.

- M -

Manual Separation - Separation of waste materials by hand, either in the home or office, or in a waste recovery plant. (Also known as hand sorting).

Materials Recovery - A process of waste handling that separates out reusable and recyclable materials such as plastics, metals, glass, and certain grades of paper.

Methane - A naturally occurring gas produced when organic material biodegrades anaerobically (oxygen deficient environment). It is often mixed with other gases. Because methane is foul, flammable and can migrate through soil, it can cause problems at landfill sites or in the surrounding area. Methane can be collected and used as a fuel to generate heat and electricity.

Mixed Paper - includes all paper fibre materials accepted under specific recycling programs, also referred to as "office blue box" recycling program (i.e. computer paper, white/coloured paper, photocopy paper, forms, files, reports, files, fax paper, and others).

Mobius Loop - The Mobius Loop symbolizes the endless use and reuse of materials. The three arrows refer to solids, liquids and gases; the three kinds of recyclable materials. The Loop was named after August Mobius, a German mathematician who died in 1868.

Municipal Solid Waste (MSW) - More commonly referred to as garbage, this waste material is handled by municipal collection and/or disposal services. It includes two main types of solid waste, residential waste and industrial, commercial and institutional waste. Municipal solid waste does not include hazardous and liquid industrial waste. Also known as garbage, refuse, rubbish and trash. Different municipalities make legal distinctions among these terms, but they are all forms of municipal solid waste.

- O -

OCC - Acronym for old corrugated cardboard.

Organics - refers to materials which can biodegrade naturally, such as vegetable/fruit cuttings, coffee grounds and food scrap from small kitchen areas and offices; cafeteria leftovers including meat, baked goods, dairy products, etc.; grass clippings, plants, flowers, and other lawn maintenance/landscaping items.

- P -

Packaging Materials - Any of a variety of plastics, papers, cardboard, metals, ceramics, glass, wood and paperboard used to make containers for foods, household and industrial products.

Plastics - A very large number of synthetic, organic compounds, usually made from petrochemicals. Different plastics have a variety of properties which makes them useful for a large number of applications. Because there are so many kinds of plastic, it is often difficult to include them in community recycling programs.

Post - Commercial and/or Pre - Consumer Waste - Waste generated after the product leaves the manufacturer, but before the final end use of the product (e.g., printers paper off-cuts and trimmings).

Post - Consumer Material - Material generated by industry, commercial and institutional facilities, and households which has served its intended purpose and can no longer be used. This does not include the in-plant utilization of rework, re-grind, re-pulp or scrap materials generated within the plant and capable of being re-used within the process that generated it.

Pollution Prevention - any action, technology, process, method or practice which :

- eliminates or reduces the toxicity, and ultimately the creation, of pollutants or waste at the source, without shifting these elements to another medium or creating new risks to human health and the environment

- optimizes processes and maximizes the efficiency of energy, water and raw materials usage to conserve natural resources and money

- promotes, encourages, or requires changes in the basic behavioural patterns of industrial, commercial, and institutional generators and individuals towards more sustainable lifestyles for individuals and business operations.

Primary Material - Virgin or new material used for manufacturing basic products.

- R -

Reclamation - The process of restoring materials found in the waste stream to usefulness or productivity. Reclaimed materials may be used for purposes other than their original use.

Recycling - Physically, chemically or biologically reprocessing solid or liquid waste in order to use the material to make a new product. A recycling program involves much more than just the actual reprocessing. It involves also the continuous separation, collection and/or cleaning of the recyclable materials and the maintenance of stable markets for the recyclable materials and useful final end-products.

Reduction - Any procedure that decreases the overall quantity or the toxicity of a waste before it is generated - also known as Source Reduction.

Reprocessed manufacturing scrap - Material generated as a result of a manufacturing process which is re-used by the same generator.

Resource Recovery - Any process that extracts value from collected waste, eg. recycling or burning as a fuel to generate energy.

Resource Recovery Facility - Also called an energy recovery or energy from waste plant. A facility where solid waste is converted into some form of usable energy or fuel.

Reuse - The direct reapplication of a product/package for the same or different purpose, in its original form

- S -

Sanitary Landfill - A method of waste disposal designed to reduce hazards to human safety and the environment. For environmental reasons many sanitary landfills are equipped with heavy plastic liners, leachate collection systems and gas capture/venting systems. Sanitary landfills can be reclaimed after reaching their waste capacity, for use recreational and parkland uses.

Separation - Division of waste into groups of similar materials, either manually or mechanically with specialized equipment. Recycled plastic packaging has been coded to make the separation process easier (see coding).

Single Service Packaging - Materials manufactured for a single use, such as foam plastic or paper cups used in food service establishments and health care centres.

Source Separation - The purposeful segregation of used materials from municipal waste into specific material categories at the point of generation, or where the waste is created. The generator may separate recyclables from other waste, but further sorting may be required. Some municipalities further sort recyclables into separate compartments in the collecting trucks, others co-mingle (combine) the recyclables for sorting at another location.

Sustainable Development - Sustainable development is growth that makes use of our earth's resources without compromising the needs of future generations.

- T -

Tipping Fee - The cost charged to dispose of waste at the disposal area such as a landfill or waste-to-energy facility; usually stated in dollars-per-tonne.

Transfer Station - A facility where waste is moved from smaller collection vehicles into larger, more cost-effective transportation units like railroad cars, barges or truck trailers.

- V -

Virgin Materials - Any basic (raw) material for industrial processing which has not been previously used.

Volume Reduction - The processing of waste materials to decrease the amount of space they occupy, usually by crushing, shredding, incineration or composting.

- W -

Waste - refers to any unwanted solid non-hazardous material that is generated through a particular manufacturing process or project or daily operation associated with an organization.

Waste Management - The entire process of collecting, sorting processing, recycling, reclaiming and disposing of waste.

SOME COMMONLY USED ABBREVIATIONS

C of A	Certificate of Approval	NIMBY	"Not In My Backyard"
EFW	Energy From Waste	OCC	Old Corrugated Cardboard
EA	Environmental Assessment	ONP	Old Newsprint
EAA	Environmental Assessment Act	PAH	Polycyclic Aromatic Hydrocarbons
EPA	Environmental Protection Act	PCB	Polychlorinated Biphenyl
HHW	Household Hazardous Waste	PET	Polyethylene Terephthalate
ICI	Industrial, Commercial and Institutional	PS	Polystyrene
MRF	Material Recovery Facility	3RS	Reduce, Reuse, Recycle
MSW	Municipal Solid Waste	RDF	Refuse-Derived Fuel
